

This is the list of the most used words in “Jolene” and as we expected, “Jolene” can clearly be seen that it is the most repeated word in the song. I also found it interesting to see that there was not much repetition of words in the song other than “Jolene.”

This tool is particularly interesting because it makes it easy to tell when the chorus is sung as Jolene is repeated over several times in the chorus.

#### R Findings:

	anger	anticipation	disgust	fear	joy	sadness	surprise	trust
1	0	2	0	0	5	1	1	3

This is the result of looking at the sentiment of the song. It is interesting to see that there is a strong sentiment of joy, when the root of the song is that she is begging for Jolene to not steal her man. This is also why it is interesting that trust has a higher value because we would think that distrust would be more of what the meaning of the song is.

	negative	positive
1	3	7

After using R to look at the polarity of the song, it tells us that the song is more positively correlated than it is negative.

The word cloud clearly shows how Jolene was repeated the most, both through the sheer size difference, but also through the words facing in different directions.

## Summary

We preferred using Voyant because of how easy it was to use. Voyant made it very simple to access the information we were looking for and it was clear that it was designed for people with no prior knowledge or experience to use. R required some more information and it was not as straightforward as Voyant was. The graphics on Voyant were also much more visually appealing than what was produced in R. When directly comparing the word clouds between the Voyant and R versions, the Voyant one had much more depth and more colors, while the R one felt like it was much more flat and lacked information that the Voyant had.
